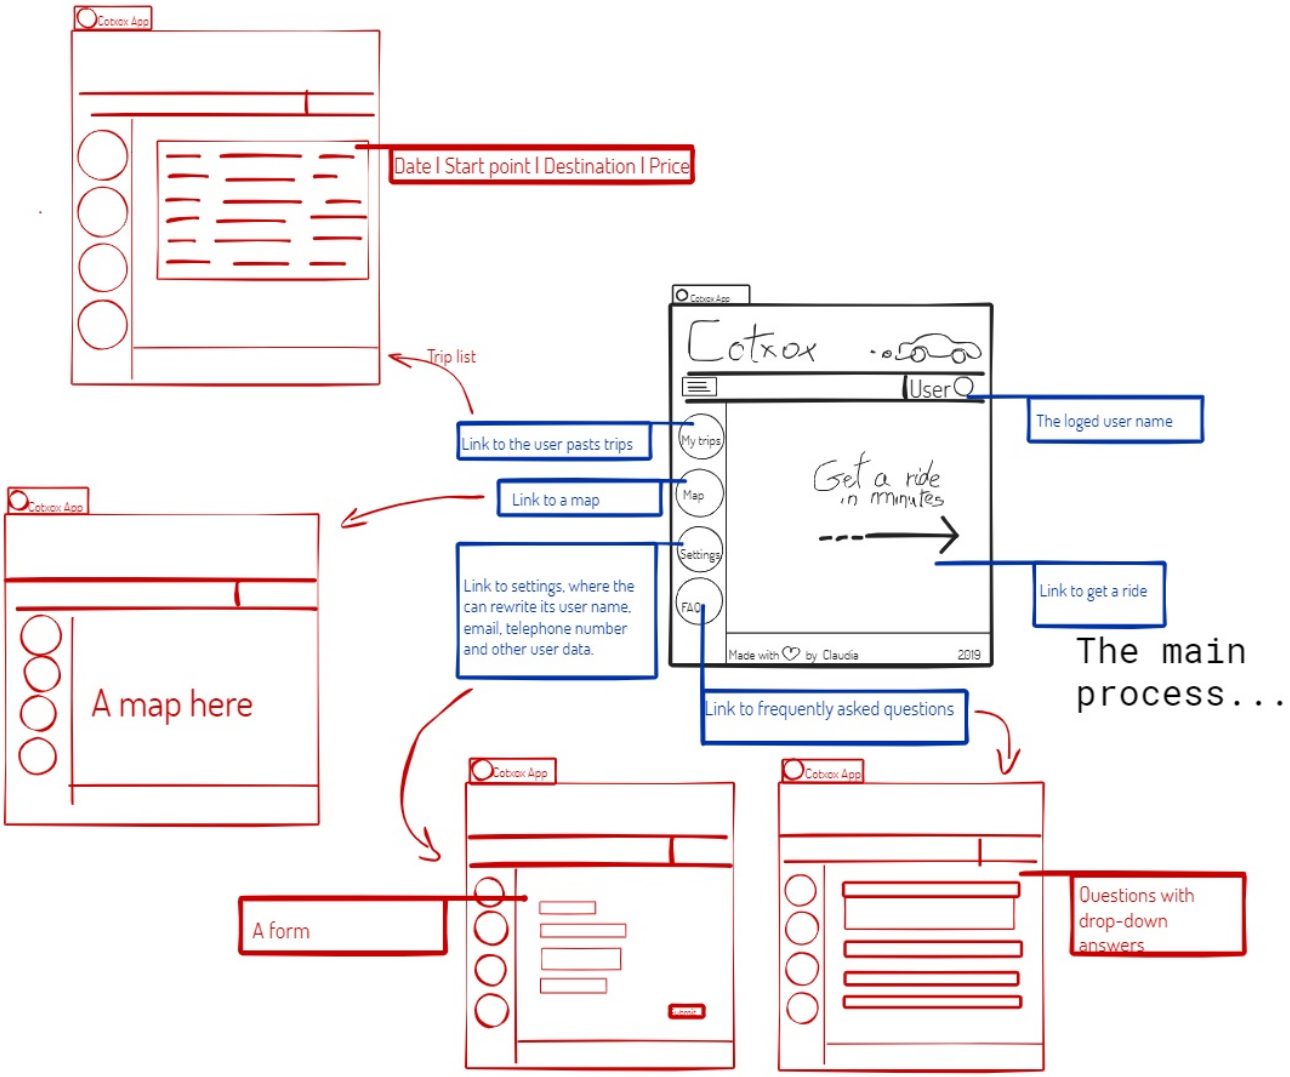
Design outline 1

Motivations 2

Development 3

1. Design Outline



I need to build a back-end to implement the main process. So I will build the static views of the Cotxox app for this project.

2. Motivations

My principal motivation to make this project was to put together all the *Languages for viewing* knowledge adquired along this course. And I choose the Cotxox App for this project because we made the logic part in the Programming subject; I thought it could be a goot idea to create the front-end part and the database to finally connect all we've been working in all subjects.

3. Development
